A common step in developing an understanding of a vertical domain, e.g. shopping, dining, movies, medicine, etc., is a taxonomy of categories specific to the domain. These human created artifacts have been the subject of research in an attempt to encode aspects of the partial ordering property of taxonomies. We compare Box Embeddings, a natural representation ...

The example above describes a person, based on the FOAF vocabulary. First, the two JSON properties name and homepage type Person are mapped to concepts in the FOAF vocabulary and the value of the homepage property is specified to be @id, i.e., it is specified to be an IRI in the context definition. Based on the RDF model, this allows the person described in the document to ...

The Semantic Web is an extension of the World Wide Web through standards set by the World Wide Web Consortium. The goal of the Semantic Web is to make Internet data machine-readable. To enable the encoding of semantics with the technologies such as Resource Description Framework (RDF) and Web Ontology Language (OWL) are used. These technologies are used to formally represent metadata.

The hardware realization of communication can take many forms; common ones include microphones and speakers, keyboards, mice, drawing pads, touch-sensitive screens, light pens, and push buttons. The choice of device interacts with the content of the display, film/videotape, speaker/audiotape, and so on. There may also be interactions between expression and device. An example is ...
